

## CASE STUDY

# Persistent Pentesting Security Services

## /// TYPE OF CLIENT

Financial Entity with more than 35,000 employees and with global presence

## /// CHALLENGE

The Client has a very considerable set of business applications, with very sensitive data and financial transaction support, and with a high dynamic of updates.

The Client felt that the traditional test model could not keep up with the dynamics of their business requirements, as well as felling a lack of agility in the reporting process and management of the results of their Pentesting actions.

## /// IMPACT

The customer was able through KEEP-IT-SECURE-24 to obtain a service with a very efficient cost compared to the service they previously had, with effective fulfilment of their objectives.

The service eventually helped the customer mitigate more than 60% of vulnerabilities compared to what they had before, and with a resolution time in some cases reduced to less than half of what had ben previously recorded.

## /// SOLUTION

This customer's requirements were immediately matched by KEEP-IT-SECURE-24 Persistent Testing service that INTEGRITY launched in 2013.

Through this service the client has Persistent Pentesting performed, integrated in its change management cycle and with manual in-depth tests performed by INTEGRITY'S certified team.

As a deliverable of this service, the client has access to the service platform where he can manage the lifecycle of vulnerabilities, ensure the interaction between the resolution teams and the INTEGRITY testing team, dynamic generation of reports and support during the effective resolution of vulnerabilities.
